Muhammad Raveel Jamil

03354465548 | muhammadraveeljamil@gmail.com | LinkedIn | GitHub | Islamabad, Pakistan

SUMMARY

Final-year Computer Engineering student at Capital University of Science and Technology with hands-on experience in software development, web development, application testing, online security analysis and AI based projects. Interested in opportunities across cybersecurity, AI/ML, and software engineering. Actively working towards building practical projects ranging from password protection and processor design to AI-based recommendation systems and database-related inventory management applications.

EDUCATION

Bachelor of Science in Computer Engineering 2023–2027 (Expected)
Capital University of Science and Technology (CUST) | Islamabad, Pakistan

SKILLS

Programming Languages: Python, JavaScript, C, C++, SQL, Verilog, SystemVerilog
Frameworks & Technologies: React, Node.js, Vite, Git
Cybersecurity: Wireshark, Kali Linux, password integrity checks, OWASP Top 10 compliance concepts
Databases: MySQL
Image Processing: MATLAB
Developer Tools & Operating Systems: Git, Linux, Logisim
Core Areas: Cyber-Security**,** software development, application testing, Artificial Intelligence

EXPERIENCE

Junior Software Developer Intern
Encoders Den *July 2026–October 2026*

- Developed and tested applications as part of the software development workflow.
- Worked on enhancement and development of the organization's website.

Junior Software Developer & AI Intern
IB Proptech *July 2026–September 2026*

- Contributed to software enhancements and web page development.
- Helped develop a platform for checking application compliance against the OWASP Top 10 to support application security reviews.

PROJECTS

P.A.S.S. — Password Protection App (Waiting For Deployment)

- Designed a password-management app concept that stores password data locally without cloud backup.
- Includes a random password generator and password-integrity and strength checking.

AI-Based Vacation Recommendation System | GitHub

- Built a system that recommends vacation plans based on user budgets and preferences.
- Used AI-based algorithms, including binary-tree classification, to support recommendations.

32-bit Single-Cycle Processor | GitHub

- Designed a 32-bit single-cycle processor in Logisim which includes all components such as memory, ALU, Control Unit.

Supermarket Inventory System (Collaborative Project) | GitHub

- Built an inventory management system application using SQL which stores information regarding inventory, sales, order placement of products.

AI Driven Bidirectional Sign Language Communication System (In Progress)

- Developing an AI driven application to enhance communication between people who use sign language and non-signers.
- Includes video-calling module with real-time translation on both ends, allowing smooth and low latency communication.
